Policy on E-Waste Disposal

The following policy explains the guidelines for the process of management and disposal of E-waste in FISAT.

Non-Usable electronic equipment in the labs which are damaged beyond repair, or those which are redundant, alternatively those items or equipment that are outdated are either identified by the lab-in-charges of the respective labs or determined as such during the annual stock verification. The items so identified are removed to the centralized collection area and such items are so indicated in the stock register of the respective labs as having been transferred to the collection point for the purpose of disposal. So also, other environmentally sensitive items such as spent CFL lambs, tube lights, spent Toner Cartridges, broken LCDs, CDs, Floppies etc. whose lifecycle is exhausted also should be sent to the centralised collection point. The items collected at the centralized collection area are indicated in the register kept there and after a certain lot size is reached the third party authorized e-waste collector is intimated for the collection of the e-waste.
